ACCESSIBILITY MASTER MASTER PROJECT DOCUMENTATION

COMPLETE WCAG 2.1 COMPLIANCE FRAMEWORK PORTFOLIO

An exhaustive architectural quality engineering document for digital accessibility evaluation on **https://www.spartoo.eu/**. This text acts as the master engineering asset log.

Target Application: https://www.spartoo.eu/
Lead QA Engineer & SDET Specialist: Arpit Choubey
Evaluation Standard: WCAG 2.1 Level A & AA Compliance Suite
Document Target Yield: 10-Page Structural Specification
Date of Execution: July 10, 2026

1. MASTER COMPREHENSIVE TEST PLAN

1.1 Project Objective & Scope

The fundamental objective of this test plan is to establish a rigorous, repeatable framework to evaluate the digital storefront of **Spartoo** against the internationally recognized Web Content Accessibility Guidelines (WCAG) 2.1 Level AA criteria. The scope encompasses all main e-commerce components including user profile registration paths, standard filtering systems, search bars, and text readability scales.

Under the direction of **Arpit Choubey (SDET)**, the testing lifecycle bridges programmatic automated rules with assistive screen readers. This guarantees that all low-vision, keyboard-only, or motor-impaired consumers experience an identical level of usability across regional storefronts.

1.2 Testing Environments & Parameters

- **Desktop Operating System Focus:** Windows 11 Enterprise / macOS Sequoia
- **Target Web Browsers:** Google Chrome Enterprise v142, Mozilla Firefox, Apple Safari
- **Assistive Screen Readers Evaluated:** NVDA (NonVisual Desktop Access), JAWS, macOS VoiceOver
- **Automated Diagnostic Engines:** Deque Axe-Core Integration Framework v4.12

2. ACCESSIBILITY COMPLIANCE STRATEGY

2.1 Hybrid Engineering Methodology

Digital accessibility testing cannot be achieved through standalone automation. Our strategy scales across four distinct methodology segments to isolate bugs cleanly:

STRATEGY SEGMENT	EXECUTION CHANNEL	TARGET PARAMETER SCOPE
Automated Core Scans	Axe-Core Runtime Injection	Color contrast boundaries, basic image alt tag checks, form controls label bindings.
Manual Keyboard Audits	Strict Traversal (Tab / Arrows)	Focus ring persistence, modal window trapping configurations, drop-down menus exit controls.
Assistive Voice Tests	Screen Reader Output Runs	Dynamic alerts, pagination text announcements, hidden element exclusions.

2.2 Boundary Matrix & Evaluation Pass Yield

Every selector tested must demonstrate a code execution standard that keeps focus order linear. If elements skip columns, the scenario instantly flags a structural defect.

3. COMPLIANCE CHECKLIST MATRIX

The following checklist governs code acceptances managed by the SDET group before production milestones:

- **Non-Text Content (WCAG 1.1.1):** Every decorative element matches `role="presentation"` or contains descriptive alternative values.
- **Info & Relationships (WCAG 1.3.1):** Data grids utilize layout structures with clear `<th>` configurations. No raw unmapped lists allowed.
- **Contrast Minimums (WCAG 1.4.3):** Foreground font layers achieve contrast parameters greater than or equal to 4.5:1 text ratios.
- **Keyboard Operations (WCAG 2.1.1):** All links, buttons, and input blocks accept input commands without locking desktop keyboard interaction flows.
- **Name, Role, Value (WCAG 4.1.2):** Form interactive controls explicitly declare operational statuses via ARIA parameters where native markers fall short.

4. ACCESSIBILITY BUG SUMMARY (38 VERIFIED DEFECTS)

An explicit total of **38 active compliance bugs** have been systematically isolated and cataloged during the current cycle run under the leadership of **Arpit Choubey (SDET)**.

Platform Defect Metric Array:

- **Color Contrast Violations (WCAG 1.4.3):** 34 distinct instances across landing page headers, footers, and interactive categories.
- **Missing Alternative Value Content (WCAG 1.1.1):** Main dynamic image node fails tracking criteria.
- **Missing Structural Input Labels (WCAG 3.3.2):** 2 critical gender selection elements inside customer registration fields completely lack labels.
- **Discernible Link Text Infractions (WCAG 2.4.4):** 1 navigation element drops context.

Resolving the color contrast patterns remains a high priority because it immediately blocks standard readability paths for individuals utilizing desktop screen magnification layouts.

5. ACCESSIBILITY COMPONENT TEST CASES

Below is a summary mapping of the core 19 verification test scenarios executed across the platform interfaces:

CASE ID	COMPONENT TARGET	WCAG CRITERIA	SDET INSPECTOR	RESULT STATUS
ATC-001	Login Page Inputs	WCAG 3.3.2	Arpit Choubey	PASS
ATC-002	Registration Buttons	WCAG 3.3.2	Arpit Choubey	FAIL
ATC-011	Hero Banner Images	WCAG 1.1.1	Arpit Choubey	FAIL
ATC-018	Header Menu Dropdowns	WCAG 4.1.2	Arpit Choubey	PASS

6. CORE REQUIREMENTS TRACEABILITY MATRIX (RTM)

This tracking index confirms that all web business requirements map seamlessly to an explicit validation scenario:

REQUIREMENT ID	WCAG SUCCESS CRITERIA MAPPING	VERIFICATION CASE ID	ASSIGNED LEAD SPECIALIST
REQ-ACC-001	1.1.1 (Non-text Content)	ATC-011 (Images Component)	Arpit Choubey (SDET)
REQ-ACC-002	1.4.3 (Contrast Minimum)	ATC-006 (Navigation Bar)	Arpit Choubey (SDET)
REQ-ACC-003	3.3.2 (Labels or Instructions)	ATC-002 (Registration Controls)	Arpit Choubey (SDET)

7. TEST EXECUTION SUMMARY REPORT

The validation summary showcases a baseline compliance metric set that points to immediate structural styling requirements:

> **Platform Analytical Metrics Suite:**
> • Total Executed Target Scenarios: 19 Modules
> • Passed Code Asserts: 16 Configurations
> • Failed Defect Blockers Found: 3 Components (Tracking **38 total elements**)
> • Core Platform Accessibility Passing Yield: **84.2% Passed**

Remediation efforts must be targeted towards central CSS framework parameters to fix color contrast anomalies in a single deployment package.

8. DIGITAL COMPLIANCE RISK ANALYSIS

IDENTIFIED RISK CONTEXT	IMPACT RANK	PROBABILITY	STRATEGIC ENGINEERING MITIGATION PLAN
Legal Non-Compliance Action	**CRITICAL**	Medium	Fix label bindings on the registration interface to support alternative inputs.
User Basket Dropout / Egress	**HIGH**	High	Modify category colors to achieve standard contrast layers.

9. RETESTING PROTOCOLS & APPROVAL SIGN-OFF

9.1 Regression Testing Protocols

Retesting cycles require clearing browser caches and running identical automated scanners alongside manual traversal audits. A ticket cannot achieve resolved status if the element continues to flag structural validation errors.

9.2 Formal Authorization Suite
